General Marking Instructions

1. It is very important that all markers should adhere as closely as possible to the marking scheme. In many cases, however, candidates will have obtained a correct answer by an alternative method not specified in the marking scheme. In general, a correct answer merits *all the marks* allocated to that part, unless a particular method has been specified in the question. Markers should be patient in marking alternative solutions not specified in the marking scheme.

2. In the marking scheme, marks are classified into the following three categories:

'M' marks	awarded for correct methods being used;
'A' marks	awarded for the accuracy of the answers;
Marks without 'M' or 'A'	awarded for correctly completing a proof or arriving at an answer given in a question.

In a question consisting of several parts each depending on the previous parts, 'M' marks should be awarded to steps or methods correctly deduced from previous answers, even if these answers are erroneous. However, 'A' marks for the corresponding answers should NOT be awarded (unless otherwise specified).

3. For the convenience of markers, the marking scheme was written as detailed as possible. However, it is still likely that candidates would not present their solution in the same explicit manner, e.g. some steps would either be omitted or stated implicitly. In such cases, markers should exercise their discretion in marking candidates' work. In general, marks for a certain step should be awarded if candidates' solution indicated that the relevant concept/technique had been used.

4. Use of notation different from those in the marking scheme should not be penalized.

5. In marking candidates' work, the benefit of doubt should be given in the candidates' favour.

6. Marks may be deducted for poor presentation (*pp*). The symbol $pp-1$ should be used to denote 1 mark deducted for *pp*. At most deduct 1 mark from Section A and 1 mark from Section B for *pp*. In any case, do not deduct any marks for *pp* in those steps where candidates could not score any marks.

7. Marks may be deducted for numerical answers with inappropriate degree of accuracy (*a*). The symbol $a-1$ should be used to denote 1 mark deducted for *a*. At most deduct 1 mark from Section A and 1 mark from Section B for *a*. In any case, do not deduct any marks for *a* in those steps where candidates could not score any marks.

8. In the marking scheme, 'r.t.' stands for 'accepting answers which can be rounded off to' and 'f.t.' stands for 'follow through'. Steps which can be skipped are shaded whereas alternative answers are enclosed with $\boxed{\text{rectangles}}$.

$= 1+nax+\dfrac{n(n-1)}{2}a^2x^2+\dfrac{n(n-1)(n-2)}{6}a^3x^3+\cdots$	1A
So, we have $na=\dfrac{3}{2}$, $\dfrac{n(n-1)}{2}a^2=\dfrac{27}{8}$ and $\dfrac{n(n-1)(n-2)}{6}a^3=b$.	
Solving, we have $n=\dfrac{-1}{2}$, $a=-3$ and $b=\dfrac{135}{16}$.	1A for any one + 1A for all
(b) The required range of values of x is $\lvert -3x\rvert<1$.	1M can be absorbed
Thus, the expansion is valid for $\dfrac{-1}{3}<x<\dfrac{1}{3}$.	1A accept $\lvert x\rvert<\dfrac{1}{3}$

7. (a) $\because$ C_1 and C_2 have a common y-intercept and $f(3)=g(3)$.	
$\therefore$ $f(0)=g(0)$ and $f(3)=g(3)$.	
Therefore, we have $b=\frac{a}{2}$ and $\frac{6+a}{5}=b-6$.	1M for setting up simultaneous equations

(b) $\because$ $\lim\limits_{x\to\infty}\frac{2x+24}{x+2}=\lim\limits_{x\to\infty}\frac{2+\frac{24}{x}}{1+\frac{2}{x}}=2$	
$\therefore$ the equation of the horizontal asymptote to C_1 is $y=2$.	1A
$\because$ $\lim\limits_{x\to -2^-}f(x)=\lim\limits_{x\to -2^-}\frac{2x+24}{x+2}=-\infty$ and $\lim\limits_{x\to -2^+}f(x)=\lim\limits_{x\to -2^+}\frac{2x+24}{x+2}=+\infty$	
$\therefore$ the equation of the vertical asymptote to C_1 is $x=-2$.	1A

(c) $C_1: y=f(x)$, where $f(x)=\frac{2x+24}{x+2}$.	
$C_2: y=g(x)$, where $g(x)=-x^2+x+12$.	
Note that $f(x)=g(x)$	
$\Leftrightarrow \frac{2x+24}{x+2}=-x^2+x+12$	
$\Leftrightarrow 2x+24=-x^3-x^2+14x+24$	
$\Leftrightarrow x^3+x^2-12x=0$	
$\Leftrightarrow x(x^2+x-12)=0$	
$\Leftrightarrow x(x-3)(x+4)=0$	
$\Leftrightarrow x=0$, $x=3$ or $x=-4$	
So, all the points of intersection are $(0,12)$, $(3,6)$ and $(-4,-8)$.	
Also, the y-intercepts of C_1 and C_2 are 12 .	
When $f(x)=0$, we have $x=-12$.	
When $g(x)=0$, we have $x=-3$ or $x=4$.	
So, the x-intercept of C_1 is -12 .	
Also, the x-intercepts of C_2 are -3 and 4 .	
$\because$ $g(x)=-x^2+x+12=-(x-\frac{1}{2})^2+\frac{49}{4}$	
$\therefore$ the maximum point of C_2 is $(\frac{1}{2},\frac{49}{4})$.

(f) Suppose Peter leaves home t minutes before 7:00 a.m.	
Then, we have $P(X \le 13+t) \ge 0.95$.	1M withhold 1M for equality or strict inequality
So, we have $P(Z \le \frac{13+t-17.5}{2}) \ge 0.95$.	
Therefore, we have $\frac{t-4.5}{2} \ge 1.645$.	1A (accept $\frac{t-4.5}{2} \ge z$, $1.64 \le z \le 1.65$)
Hence, we have $t \ge 7.79$.	
Thus, the required time is 6:52 a.m.	1A

考生表現

甲部（必答題）

題號	一般表現
1	良好。部分考生未能應用容許 r 為有理數的更一般的公式，而只考慮 r 為正整數的公式。
2	平平。部分考生仍然混淆了定積分與不定積分。
3	良好。部分考生未能應用鏈式法則。
4	平平。很多考生都懂得計算條件概率，但他們未能顯示明白背後的概念；若他們明白，則可省卻很多運算。
5	良好。部分考生混淆了「互斥事件」的定義與「獨立事件」的定義。
6	平平。部分考生仍未熟習數出有關事件的數目及分辨有關事件是否獨立。

乙部（6 題選答 4 題）

題號	選題百分率	一般表現
7(a)	81	甚佳。
(b)		良好。部分考生未能適當地利用方程表示漸近線。
(c)		平平。部分考生沒有標明圖像的交點。
(d)		平平。很多考生於運用積分法求面積時感到困難。
8(a)	37	甚佳。
(b)		良好。部分考生未能證明該駐點為極大點。
(c)(i)		平平。考生於前部分表現理想，但後部分表現卻不符理想。只有部分考生能求得所減少的黑煙排放總量。
(d)		欠佳。由於未能解 (c)(i) 部，故此很多考生未能完成本部。
